

## FEATURES

### 1. Compact with high contact rating

Even with small 10 mm .394 inch (H) x 11 mm .433 inch (W) x 20 mm .787 inch (L) (dimensions, high capacity switching is provided: 1a, 8 A 250 V AC; 2a and 1a1b, 5 A 250 V AC.

### 2. High switching capability

High contact pressure, low contact bounce, and wiping operation improve resistance to weld bonding. Resistant against lamp load and dielectric loading: 1a achieves maximum switching capacity of 2,000 VA (8A 250 V AC).

### 3. High sensitivity

Using the same type of high-performance polar magnetic circuits as DS relays, by matching the spring load to the magnetic force of attraction, greater sensitivity has been achieved. The resultant pick up sensitivity of about 190 mW makes possible direct driving of transistors and chips.

### 4. High breakdown voltage

Breakdown voltage has been raised by keeping the coil and contacts separate.

Between contact and coil	Between contacts
3,000 Vrms for 1 min. 5,000 V surge breakdown voltage	1,000 Vrms for 1 min. 1,500 V surge breakdown voltage

Conforms with FCC Part 68

### 5. Latching types available

### 6. Wide variation

Three types of contact arrangement are offered: 1a, 2a, and 1a1b. In addition, each is available in standard and reversed polarity types.

### 7. Sealed construction allows automatic washing

### 8. Complies with safety standards

- Complies with Japan Electrical Appliance and Material Safety Law requirements for operating 200 V power supply circuits
- Complies with UL, CSA and TÜV safety standards
- Complies with EN 60335 / GWT (test report available)

### 9. Creepage distance and clearances between contact and coil: 3.5 mm

### 10. Sockets are available.

## TYPICAL APPLICATIONS

1. Office and industrial electronic devices
2. Terminal devices of information processing equipment, such as printer, data recorder.
3. Office equipment (copier, facsimile)
4. Measuring instruments
5. NC machines, temperature controllers and programmable logic controllers.

## NOTES

### 1. Soldering should be done under the following conditions:

- 250°C 482°F within 10 s
- 300°C 572°F within 5 s
- 350°C 662°F within 3 s

### 2. Cleaning

For automatic cleaning, the boiling method is recommended. Avoid ultrasonic cleaning which subjects the relays to high frequency vibrations, which may cause the contacts to stick. It is recommended that a fluorinated hydrocarbon or other alcoholic solvents be used.

### 3. External magnetic field

Since DY relays are highly sensitive polarized relays, their characteristics will be affected by a strong external magnetic field. Avoid using the relay under that condition.

### 4. Coil operating power

Pure DC current should be applied to the coil. The wave form should be rectangular. If it includes ripple, the ripple factor should be less than 5%. However, check it with the actual circuit since the characteristics may be slightly different.

5. When using, please be aware that the a contact and b contact sides of 1 Form A and 1 Form B types may go on simultaneously at operate time and release time.

For Cautions for Use, see [Relay Technical Information](#).

**FIXING AND REMOVAL METHOD**

1. Match the direction of relay and socket.

2. Both ends of relays are fixed so tightly that the socket hooks on the top surface of relays.

Good No good

3. Remove the relay, applying force in the direction shown below.

4. In case there is not enough space for finger to pick relay up, use screw drivers in the way shown below.

Notes: 1. Exercise care when removing relays. If greater than necessary force is applied at the socket hooks, deformation may alter the dimensions so that the hook will no longer catch, and other damage may also occur.  
2. It is hazardous to use IC chip sockets.
